Made-to-measure materials handling equipment

Storage and distribution of mixed products
is common in almost all sectors of industry.

Goods that are bulky and/or difficult to handle
are a great challenge for businesses.

Transport, storage, handling and distribution:
CORDES products are designed to perform
each of these steps while minimising damage risks,
handling times and personnel requirements.

THAT IS OUR GOAL

CORDES ® GOODs in motion

CORDES **GOODs in motion**

Behind every strong brand is a strong manufacturer.

CORDES gives your customers the benefit of an experienced manufacturer's flexibility. Tried-and-tested logistics permit instant delivery, even of large quantities. Developing customer-specific solutions and producing variants to special order is our day-to-day business. We can do this because we have the necessary design and production capacity and highly trained skilled personnel. We are the competent contacts for resellers and their customers. Cordes has nearly half a century of manufacturing competence behind it.
In other words,
CORDES stands for sophisticated quality products and for speedy, reliable delivery based on an efficient logistics chain.

The "fold trick"

Every Corlette® folds away in a trice and takes up a minimum of space when empty.
This saves storage space and cuts freight costs.

An Invention of CORDES

Corlette® Basics

Corlettes® are the made-to-measure solution. Suitable for low-rise, high-rise and high-density storage. Robust tubular steel frame construction. High-grade synthetic resin coating, blue RAL 5012, wheels: 100 mm plastic, 3 swivel castors and 1 directional wheel. Upgradable with special accessories. See Chapter A. 4.10

Chapter *A* 5.50

Auto-twist castor
CORDES has modified the Corlette® to fit pallet racks. The auto-twist castor makes it possible. It automatically twists to a position that allows the Corlette to slot into a pallet rack just like a Euro-pallet. So there is no problem about using **CORDES** Corlettes® in a rack system in combination with Euro-pallets.

The auto-twist castor which means any Corlette® can be stacked in a pallet rack. The end position of the auto-twist castor can be set to cater for various rack dimensions. The Corlettes® indicated can be supplied with the auto-twist castor.

Corlette® and Euro-pallet in one rack

CORDES GOODs in motion
The Corlette® with the auto-twist castor is as easy as ever to move.

As soon as the Corlette® is lifted and is no longer resting on the ground, the auto-twist castors spring from wherever they are to a predefined position.

The position of the castors between the cross-members means the Corlette® is secured against sliding.

So the **CORDES** auto-twist castor guides your products in the Corlette® safely into the pallet rack.
Corlette®
FurniBox®

The FurniBox® is right for almost all goods in internal transport and storage. Stacked three high, it makes full use of the storage height. Both manually and towed, our FurniBox® will go everywhere you need it.

Corlette® in rack

Corletterack
Optimum use of rack bays with a clear width
of 4.30 m is possible with
– 2 x FurniBox® 2000 or
– 3 x FurniBox® 1300 or
– 1 x FurniBox® 2700 and
▮ 1 x FurniBox® 1300

The two cross-members of the rack compartment
should be 770 mm deep (external over all) specifi-
cally for the rack runners of FurniBoxes®; the inserti-
on height of the support bars should ideally be 2500
mm for upholstered furniture and 3200 mm for all
other furniture.

This rack system is already in widespread use. If
you would like to see it "in the flesh", we'll be glad to
arrange an appointment.

The rack runners also
ensure the necessary
underclearance for the
stacker forks.

Corlette®

Corlette®

Pallet rack
with loaded EURO-Pallete

In practice there are also Corlette high-rise systems that store not only Corlettes but also Euro-pallets. As a rule, the pallets are used at ground level and are limited to an intermediate height of 1.5 m. On the other hand there are also pallet-rack systems with the typical dimensions that store Corlettes. However, as with storage of pallets in the Corlette rack, either the rack must be equipped with distance supports or the Corlettes must be adapted to the dimensions of the pallet rack, e.g. with the auto-twist castor.

Auto-twist castor in Chapter **Info** 1.20
A high-rise store with Corlettes combines the advantages of the Corlette with the height utilisation of the rack system. When the Corlette is inserted in a high-rise rack, the excess over the external height of the Corlette is only limited by the height of the rack compartment, which can be freely selected between 2 m and 5 m. In conjunction with computerised storage management, other advantages include reduced complaint rates and virtually 100-percent stock security. All movements in the store can be fully optimised by IT. High-rise storage is particularly effective if an inserted Corlette carries only one article or the articles belonging to one order, so that there is no need for multiple access to a Corlette involving several insertion and removal operations.

Auto-twist castor in Chapter **Info** 1.20

Standard-Corlette®

The Standard Corlette® is right for almost all goods in internal materials handling and storage. By stacking three-high it is possible to make full use of the storage height. Both manually and towed, our Corlettes® are easily moved to wherever they are needed.

Corlette® - Accessories

Corlette®

Universal Corlette

1. Wire end walls
Gaps can be reduced by using smaller mesh sizes or additional flat bars.

Wire end walls
1.

2. Shelves
For insertion as intermediate shelves at one or more levels.

Shelves
2.

3. Front door
Insertable semi fold-down front door for securing load. Lower half can be flapped up depending on model.

Front door
3.

4. Wheel direction lock
Zum fixieren einer Lenkrolle. Geradeaus-lauf garantiert.

Special dimensions
Adapted to customer's application

Wheel direction lock
4.

5. Coating
Nearly all RAL shades available on request. Colour can be applied as single component paint or as powder coating. Electro-galvanising or hot-dip galvanising also available on request.

Coating
5.

Labelling elements
6.

6. Labelling elements e.g.
Aluminium board with blackboard coating, Labelling element for EAN+ barcode in storage management system.
Metal pocket and labelling pocket

7. Base panel
- chipboard
- plywoo
  - film coated
  - screen printed
- ESD panel
- OSB boar
- medium-density fibreboard (MDF)
- plastic

8. Thread guard
Minimises uptake of threads from floor.

Base panel
7.

Double door
with locking mechanism

Shelf hooks
Permit shelf insertion at points where there is no round tube.

Stacking limiter
Not in combination with PVC protective clip

Thread guard
8.

Base frame
U-section with integrated stack claws (for Universal Corlette)

Front door **3.**

Furnibox®

PVC protective clip
11.

With a variety of smart accessories parts that Cordes has been specially developed for the Corlette ®, it is even more efficient.

Shoulder

Side hook
1.

1. Side hook
For fitting load securing tube / front doors to a Corlette.

Foam plastic protection
9.

Stowage for load
12.   securing tube at rear

2. Securing strap
For securing goods in any desired position on the Corlette, even if not fully loaded. Flexible, tear-proof, UV resistant. One end looped in place, other end with hook; also hook / hook. Textile or rubber.

Securing strap
2.

Supporting arm
10.

Automatic base retainer
13.

Round tube

3. Load securing tube
Dual use: can be inserted as support tube or as load securing tube for closing the open side.

Load securing tube
3.

Drawbar
7.

Double-wall sheets
4.

4. Double-wall sheets
For lining the ends and back to protect the goods, and to prevent small items falling out.

5. Base panel
Also wire mesh or perforated sheet, allows water to pass through if necessary e.g. rain or fire-fighting water.

Base panel
with automatic
bottom lock
5.

6. Auto-twist castor
It is the auto-twist castor that makes it possible to insert a Corlette in a pallet rack. See Chapter A Info 1.20

Auto-twist castor
6.

Coupling
7.

Stacker pockets
15.

Rack runners
14.

Stack claws
8.

7. Coupling / drawbar
For towing one or more units. Retaining devices, various types.

1 2 3 4

8. Stack claws
These permit secure stacking of Corlettes

9. Foam plastic protection
Easy to fit, easy to change, wherever additional protection is needed.

10. Supporting arm
Four advantages: single-handed operation from the front, optimum protection of goods, can be used on both sides, retrofitting also possible.

11. PVC protective clip
Perfect protection for long items leaning on sides.

12. Stowage for load securing tube at rear
Safe and simple storage when not in use.

13. Automatic base retainer
Automatically holds base when flapped up..

14. Rack runners
Requirement for stacking in Corlette or pallet racks. Continuous or split. Also possible in side wall.

15. Stacker pockets
The diagonally staggered stacker pockets permit trouble-free handling by fork-lift truck.
Low-rise stores

Fast moving.
No more reloading.
The Corlette®.

The Corlette® creates space and organisation in low-rise stores and also ensures that items which belong together stay together. It goes without saying that the Corlette® is quick and easy to move with all towing vehicles in common use.

The Corlette® keeps your orders together from start to finish. And with its easy-running wheels the Corlette also guarantees speedy transport within your store, whether manually or with electric towing vehicles. That way you can make full use of your storage space and still have speedy access to goods "in the farthest corner".

High-density stores

A

CORDES GOODs in motion
Stack high.
Gain space.
The Corlette®.

The Corlette® enables you to double or even treble your storage capacity without having to rent a single extra square metre. In a high-density store that's really easy and quite affordable.

Simply use a normal fork-lift truck to stack the Corlettes® two or three high, and use the height of your store to the full. And the best of it is that with the Corlette® you can reduce movements for seasonal and mass goods and store even more on the same space.
Rack stores

Direct access.
Even to the very top.
The Corlette®.

High, higher, highest! The Corlette® gives you speedy direct access to your products, regardless of what level they are in your pallet rack store. A particularly practical feature is that you can even use the Corlette® to store items of furniture that project upwards, allowing you to keep even unwieldy items well protected and available at all times.

Time for combinations! Of course the Corlette® rack is not the only rack the Corlette® fits into. The Corlette® can also be used in pallet racks and offers perfect protection to mixed goods.

The auto-twist castor was developed for this purpose and can also be retrofitted to any Corlette®. The Corlette® is so flexible.

The Corlette® is particularly suitable for narrow-aisle trucks – aisles can be as little as 1.80 m wide. And with order-picking stackers you can conveniently go to the desired rack positions with an empty Corlette, remove individual goods stored there and safely transport them further.

In this way you can use your rack compartments efficiently to store large quantities of products, but still remove them rapidly when needed.
Corlette® - rack
(width 4300 mm, depth 780 mm)

Pallet- rack
(width 2700 mm,
depth 1100 mm)
Fully automated high-rise stores

In use everywhere.
Always safe.
The Corlette®.

The Corlette® is perfect for modern computer-controlled high-rise stores: you can make hundreds of inward and outward movements per day without major personnel requirements if you use the Corlette® in your high-rise pallet store.

Quite apart from speed and efficiency, the Corlette® provides protection for your goods even at great heights (e.g. 47 metres). So you can keep your complaints rate low even if your products reach great heights.

Since the Corlette® makes for safe and trouble-free automatic reloading, it is a must for every high-rise pallet store.

5. 50

Combined stores

CORDES   GOODs in motion
Move fast.
Stack high.
The Corlette®.

How often do you have to flexibly adapt the storage situation in your combined store to cope with shifts in the range and seasonal fluctuations? Large orders come in and others have to be shifted aside or stored for longer periods. In other words, situations where lots of labour is needed to reorganise the goods and the risk of damage increases.

It's easier and safer with the Corlette®. With its easy-running wheels the Corlette® can move around low-rise stores quickly and without much effort: a single worker can move up to 1000 kg manually with the Corlette®. When stacked they offer massive spare space for peak times, and in the rack they ensure rapid access to the goods at all times.

And your Complaints Department will be delighted that the Corlette® protects your products like a safe even when things get hectic.

Upholstered suite trolley

These trolleys for upholstered suites or elements permit elegant and easy movement to any desired position. Despite their light weight, they are made of robust steel tube and designed specially for upholstered furniture. The pull-out bars are galvanised and continuously retractable. So they can adjust to the individual upholstered load.

Empty upholstered element trolleys can be nested to save space. The pull-out bars are galvanised and continuously retractable, enabling the support area to be adjusted to the individual element.

Bedroom box

Space saving is the paramount criterion for the bedroom box. Its small depth permits safe storage and order-picking of furniture of little depth. When not in use this handling appliance can also be folded up in next to no time.
Bedroom box

Safe Corlette®

In these days of online business, customers want to order from home and have the product in their hands within 24 hours. The parcels have to be transported without delay direct from the sender to the regions via truck and distribution depot. European post and parcel carriers have to face this challenge afresh every day. Increasing numbers of them are already using our Safe Corlette with great success. It protects the parcels from damage during transport in trucks and internal materials handling operations.

Safe Corlette®

Foldable and collapsible Corlette mit lockable double door. The Corlette has a central foot brake and an automatic drawbar. The two features are interlinked, so the brake is automatically released when a towing vehicle is attached. Other features of this versatile Corlette are a V-drawbar with automatic stay-up and fold-down function and manually releasable wheel direction locks on both sides which are also automatically released when the door is opened. The base panel is of plywood, film-coated and flush mounted in the frame. When released, the base is automatically raised. The base substructure is designed so that the Corlette can be accessed by stacker from all 4 sides. This Corlette is rounded off by a high-quality durable and resistant two-component paint finish in RAL 5010 gentian blue.

Stack racks

CORDES GOODs in motion
Heavy-duty stacking rack

Stacking racks of various kinds are used for loads of 1000 kg upwards. Stable despite heavy weights, flexible for high-density storage without loss of space for aisles. Stacking racks are easy to adjust to your products and their fluctuating quantities (e.g. seasonal products). And they can take you to great heights – in stacks of up to 5 units. When not in use, our stacking racks can be reduced to 20% of their original volume.

Heavy-duty stacking rack

Article. No. sl-150.500

Dimensions	Weight	Load cap.	Support cap.	Stackable
W / D / H mm	kg	kg	kg	
1500 / 1050 / 2000				
Internal dimensions	95	1000	2400	4 high
w / d / h mm				
1380 / 930 / 1700				

Load surface height: 165 mm, underclearance: 95 mm,
usable height: 1700 mm,
4 loose posts and 3 transverse tubes to stabilise frame.

Thanks to the special design, the racks can stand safely side by side to save space.

Load example

When empty, the heavy-duty stacking racks can be dismantled and stacked to save space.

Tyre stacking rack

Stability ensured by robust square tubular construction with foldable sides. Variable insertion of support tubes permits two levels of upright storage of tyres mounted on wheels. The benefit: extra large stacking feet simplify accurate stacking. These racks also create more space in your store by stacking 4 high. Robust design ensures the necessary stability. A wide variety of tyre types can be stored in the racks.

Heavy-duty Cortainer

Heavy-duty Cortainers can carry loads of up to 1.6 tonnes and are stackable up to 4 high. Suitable for storing Euro-pallets, cartons, sacks or other piece goods. Despite the firmly welded construction of the Cortainer, it can be nested to save space. When empty, up to 7 units can be nested. Round tubes can be stored at the rear to save space, see Fig. 2.

Stack racks

Beer tent furniture rack

Bear tent furniture racks give your store more space thanks to 4-high stacking and greater flexibility thanks to fast, space-saving folding. The robust square-tube framework with foldable side elements ensures the necessary stability. Other advantages are reduced fire risk, permeability to fire-fighting water, great strength and low weight.

Individual solutions

Cordes and logistics service providers

*A distribution logistics project*

Individual solutions

Companies are handling less and less of their logistics themselves, but are increasingly outsourcing to logistics service providers. Producers are concentrating on their core competencies and leaving logistics to the specialists. In the context of such outsourcing projects, it is necessary to design more and more rolling containers and materials handling concepts. The following example describes how Cordes developed and produced three different load carriers for children's shoes in cooperation with a logistics service provider.

When the shoe boxes are delivered, they are sorted on a conveyor path and loaded into the order picker. Large batches are stored in a rack, if necessary using pallet converters.

Our Corlettes make it possible to transport an entire order without having to handle every single shoe box. An automatic chain conveyor in combination with an elevator makes it possible to use the Corlettes and order-pickers at the second level.

After sorting in the order picker, all shoe boxes pass through a scanner curtain and are thus captured in a single operation, before being placed ready for shipment.

CORDES GOODs in motion
1

When the shoe boxes are delivered, they are sorted on a conveyor path and loaded into the order picker.

2

Large batches are stored in a rack, if necessary using pallet converters.

3

Our Corlettes make it possible to transport an entire order without having to handle every single shoe box.

4

An automatic chain conveyor in combination with an elevator makes it possible to use the Corlettes and order-pickers at the second level.

5

After sorting in the order picker, all shoe boxes pass through a scanner curtain and thus captured in a single operation, before being placed ready for shipment.

Individual solutions

The order-picking trolley was developed and produced jointly by Cordes and a logistics service provider as a load carrier for children's shoes, see Chapter F 1.31.

1185 / 2x400 / 1320					

Load surface height: 365 mm
Colour: Light blue RAL 5012
Wheels: 2 x 200 mm plastic swivel castors, 2 x 200 mm plastic fixed castors

In the wholesale press and publishing world, weights quickly reach very high levels. Order-picking of magazines or newspapers requires a load carrier that ensures easy handling and safe distribution of the products. Since the base has a slight inward tilt, the magazines cannot fall out. The shelves can be flapped up against the central wall. This permits nesting of the trolleys to save space.
